## Test Summary

### Conducted Emissions

*Result: Pass*

### Radiated Emissions

*Result: Pass*

## Product information

### Manufacturers declarations

	Receiver
Operating frequency range	434 MHz
Number of channels	1
Type of antenna	Integral Antenna
Connection to public utility power line	Yes
Nominal voltage	V <sub>nom</sub> : 3.0Vdc (2 x 1.5V "AA" battery) and/ or 100-240Vac

### Product function and intended use

The equipment under test (EUT) is a receiver operating at 434MHz. And it is powered by 3.0Vdc (2 x 1.5V "AA" battery) and/ or 100-240Vac.

### FCC ID: 2AEWF00092596V

Models	Product description
92596	Weather Station

### Submitted documents

Circuit Diagram  
Block Diagram  
Bill of material  
User manual  
Rating Label

### Independent Operation Modes

The basic operation modes are:

- Receiving mode .

For further information refer to User Manual

### Related Submittal(s) Grants

This is a single application for certification of the receiver. The FCC ID of the corresponding transmitter is 2AEWF00092596S.

### Remark

- None.

## Test Set-up and Operation Mode

### Principle of Configuration Selection

**Emission:** The equipment under test (EUT) was configured to measure its highest possible radiation level. The test modes were adapted accordingly in reference to the instructions for use.

### Test Operation and Test Software

Test operation should refer to test methodology.

- No testing software is provided by the applicant.

### Special Accessories and Auxiliary Equipment

The product has been tested together with the following additional accessories:

- AC-DC adaptor, Model: 6301-US-A, Input: 100-240VAC 50/60Hz, Output 5.0VDC 1000mA.
- 5ohm resistive load.

### Countermeasures to achieve EMC Compliance

- none

## Test Methodology

### Radiated Emission

The radiated emission measurements were performed according to the procedures in ANSI C63.4-2003.

The equipment under test (EUT) was placed at the middle of the 80 cm height turntable, and the turntable is 3 meters far from the measuring antenna. During the testing, the EUT was operated standalone and arranged for maximum emissions. The EUT was tested in three orthogonal planes.

The investigation is performed with the EUT rotated 360°, the antenna height scanned between 1m and 4m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations. Repeat the measurement steps until the maximum emissions were obtained.

All radiated tests were performed at an antenna to EUT with 3 meters distance, unless stated otherwise in particular parts of this test report.

### Field Strength Calculation

The field strength at 3 m was established by adding the meter reading of the spectrum analyzer to the factors associated with antenna correction factor, cable loss, preamplifiers and filter attenuation.

The equation is expressed as follow:

$$FS = R + AF + CF + FA - PA$$

Where FS= Field Strength in dBuV/m at 3 meters.

R = Reading of Spectrum Analyzer in dBuV.

AF = Antenna Factor in dB.

CF = Cable Attenuation Factor in dB.

FA = Filter Attenuation Factor in dB.

PA = Preamplifier Factor in dB.

FA and PA are only be used for the measuring frequency above 1 GHz.

## List of Test and Measurement Instruments

**Hong Kong Productivity Council (Registration number: 90656)**

### Radiated Emission

Equipment	Manufacturer	Type	Cal. date	Cal. Due date
Semi-anechoic Chamber	Frankonia	Nil	14-Apr-15	14-Apr-16

## Results FCC Part 15 – Subpart B

Subclause 15.107 – Conducted Emission on AC Mains						Pass
Test Specification : ANSI C63.4 – 2003 Mode of operation : Receiving mode Port of testing : AC Mains input port of power supply Detector : Quasi-peak and Average RBW : 9 kHz Supply voltage : 120Vac 60Hz Temperature : 23°C Humidity : 50%						
Requirement: The emissions from the unintentional radiators comply with the following limit.						
Results: Pass						
Live measurement						
Frequency range (MHz)	Frequency (MHz)	Quasi-peak dBµV	Average dBµV	Limit QP (dBµV)	Limit AV (dBµV)	Verdict
0,15 – 0,5	0.150	44.3	27.5	66 - 56	56 - 46	Pass
> 0,5 - 5	No peak found	---	---	56	46	Pass
> 5 - 30	No peak found	---	---	60	50	Pass
Neutral measurement						
Frequency range (MHz)	Frequency (MHz)	Quasi-peak dBµV	Average dBµV	Limit QP (dBµV)	Limit AV (dBµV)	Verdict
0,15 – 0,5	0.150	40.3	27.5	66 - 56	56 - 46	Pass
> 0,5 - 5	No peak found	---	---	56	46	Pass
> 5 - 30	No peak found	---	---	60	50	Pass
Results: Pre-scan has been conducted to determine the worst-case mode from all possible combinations between available modulations and data rate.  The radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150kHz to 30MHz does not exceed the limits. For test Results plots refer to Appendix 1, page 2.						

Subclause 15.109 – Radiated Emission		Pass
Test Specification : ANSI C63.4 – 2003 Mode of operation : Receiving mode Port of testing : Enclosure RBW/VBW : 120 kHz for f < 1 GHz 1 MHz / 3 MHz for f > 1 GHz Supply voltage : 3.0VDC Frequency range : 30MHz to 2GHz Temperature : 23°C Humidity : 50%		
Requirement:	The field strength of emissions from the unintentional radiators comply with the following limit.	
Results:	Pass	
Vertical Polarization		
Freq MHz	Level dBuV/m	Limit/ Detector dBuV/m
31.590	20.7	40.0 / QP
48.214	26.9	40.0 / QP
123.360	30.0	43.5 / QP
Horizontal Polarization		
Freq MHz	Level dBuV/m	Limit/ Detector dBuV/m
121.680	19.7	43.5 / QP
